

GitHub Upload Steps

1. Go to www.github.com
2. If you already have an account, use the Sign in option
3. If you do not have an account, click Sign up
4. Enter your email Id and the necessary details asked for and create an account.
5. Log in to your account and you will be able to see a window as below

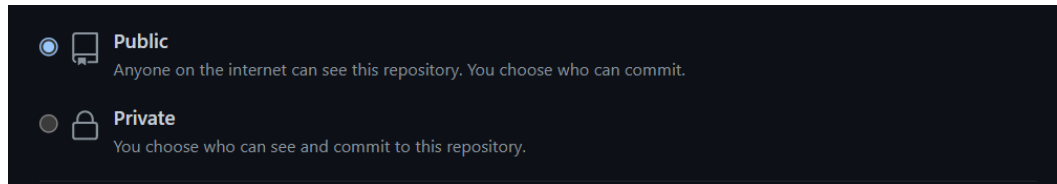

6. Click on the New button (Green button next to Recent Repositories) and you will get a window as below

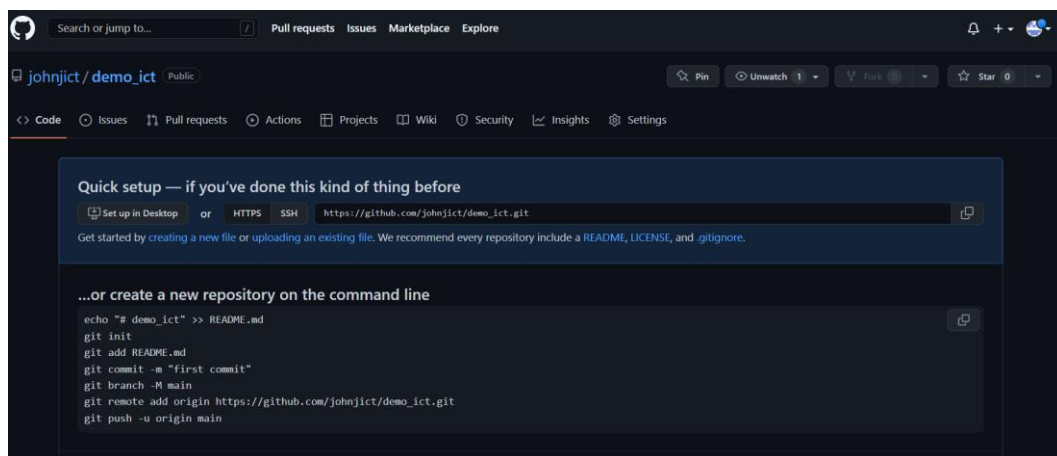

7. Give a name to your repository (Repository is just like a folder in your system) and a description (not necessary).

8. This repository can be used to upload all your assignments/case studies.
So, try to give it a name which suits best.

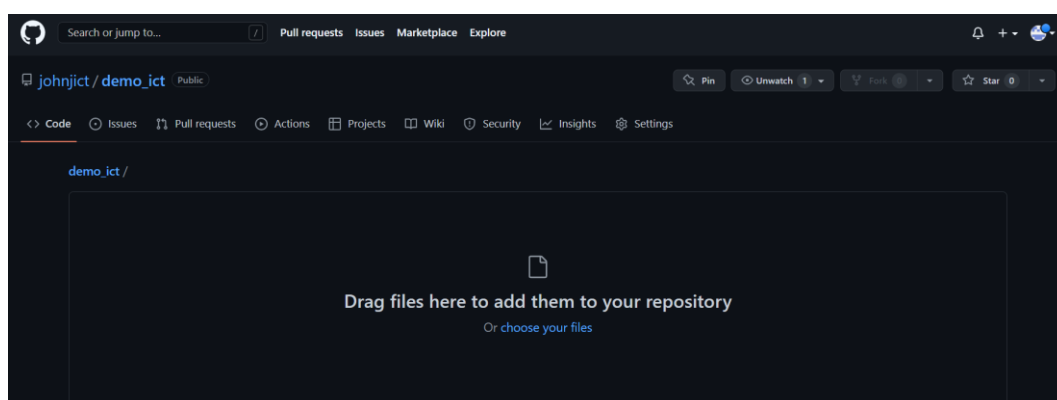

9. Make sure you are creating your repository as Public

10. Leave the other options as such and click on the create repository option and you will be able to see a window as below

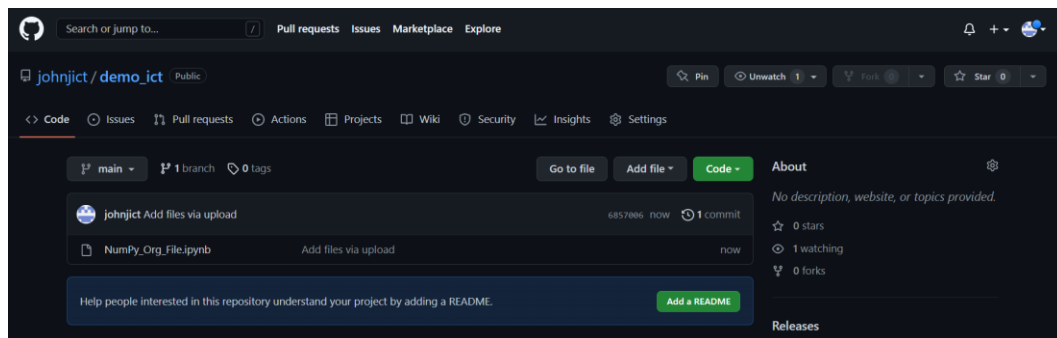

11. Next, click on the 'upload and existing' file option and you can find the below window

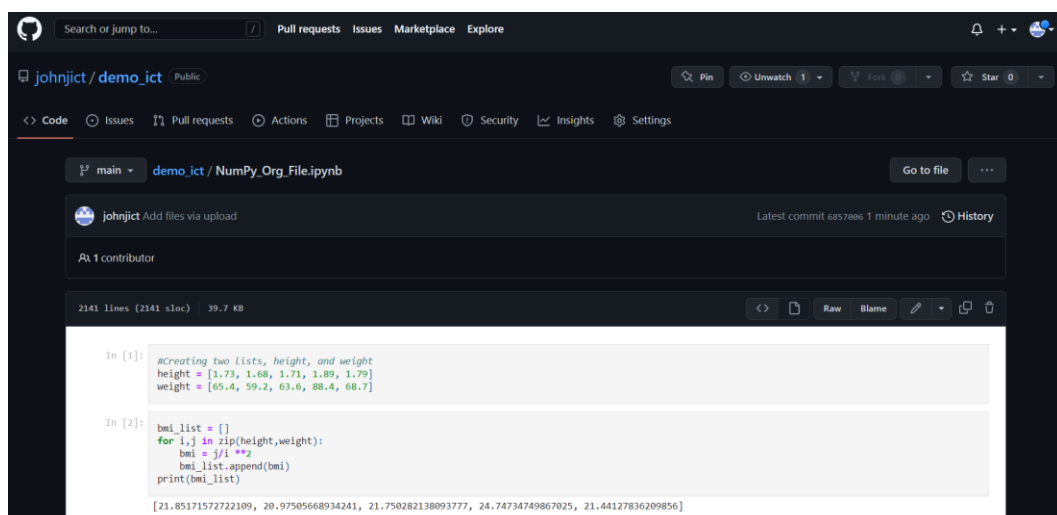

12. Click on the 'choose your files' option and select the .ipynb file you want to upload.

13. Make sure that the .ipynb file is in such way that the codes are executed, and outputs are displayed
14. Once the file is uploaded, click on the 'commit changes' button below.

Now you will be able to see the file inside your repository as below

15. Click on the file you have uploaded and make sure the codes and outputs are visible

16. Copy the url in the address bar (when the .ipynb file is kept open) and paste it inside Paatshalala.
17. You can add all your assignments/case studies to this repository by using the add file option inside the repository.
